1. Introduction

The Quarterly Labour Force Survey (QLFS) is a modular survey under the Kenya Continuous Household Survey Programme (KCHSP). The programme is designed to provide a constant stream of data on a wide range of socio-economic indicators. The QLFS collects information about the Kenyan labour market activities for the population aged 5 years and above.

This quarterly release analyses the labour market situation for the population aged 15 to 64 years. Topics covered include labour force participation, employment, unemployment, Labour underutilization and inactivity.

This report presents the results for the period September to December 2019.

2. Key Highlights

Table 1 presents a summary of the Key Labour Market Indicators contained in this report.

Table 1: Key Labour Market Indicators

September - December			
Indicator	Quarter 3	Quarter 4	Change
Population (15-64).....	26,951,054	27,129,695	0.7
Labour Force.....	18,811,024	19,032,617	1.2
Employed.....	17,816,382	18,103,022	1.6
Employment/Population Ratio (%).....	66.1	66.7	0.6
Unemployed.....	994,642	929,595	- 6.5
Unemployment Rate (%).....	5.3	4.9	- 0.4
Long-Term Unemployed.....	431,777	415,136	- 3.9
Long-Term Unemployed (%).....	2.3	2.2	- 0.1
Not in Labor Force (Inactive).....	8,140,030	8,097,078	- 0.5
Labour Force Participation (%).....	69.8	70.2	0.4
Labour Under Utilization.....	1,597,387	1,501,269	- 6.0
Labour Under Utilization (LU2).....	8.5	7.9	- 0.6

3. Labour Force Participation

Table 2 presents the labour force participation rates by age cohorts. The participation rate stood at 70.2 per cent for Quarter 4. The age group 45 – 49 years recorded the highest rate at 90.5 per cent while the age group 15 – 19 years recorded the lowest rate at 33.8 per cent.

Table 2: Labour Participation Rates by Age Cohorts

Age	Quarter 3			Quarter 4			Change
	Labour Force	Total Population	Rate	Labour Force	Total Population	Rate	
15-19	1,483,474	5,246,942	28.3	1,784,269	5,281,721	33.8	5.5

60-64	677,123	863,614	78.4	708,902	869,338	81.5	3.1
Total	18,811,024	26,951,054	69.8	19,032,617	27,129,695	70.2	0.4

4. Employment

4.1 Employment to Population Ratio

Table 3 presents the Employment to population ratios for the population (15- 64). The survey revealed that the overall employment to population ratio in the country, for the working age population, was 66.7 per cent for quarter 4, up from 66.1 per cent in quarter 3, a change of 0.6 per cent between the two quarters.

Table 3: Employment to Population Ratios

Age	Quarter 3			Quarter 4			Change
	Employed	Total Population	Ratio	Employed	Total Population	Ratio	
15-19	1,409,891	5,246,942	26.9	1,710,336	5,281,721	32.4	5.5
20-24	2,108,803	4,414,851	47.8	2,138,628	4,444,115	48.1	0.3

5. Unemployment, Long term Unemployment and Labour Underutilization

In this section, Unemployment and Long-term unemployment rates are discussed. Also presented are details of labour underutilization. These results are presented in Tables 4, 5 and 6, respectively.

5.1 Unemployment rate

As indicated in Table 4, the survey results give a 4.9 per cent unemployment rate using the strict definition. The youth aged 20-24 had the highest proportion (14.2%) of the unemployed. On the other hand, those aged 60 – 64 years had negligible unemployment rates. The unemployment rate dropped slightly in quarter 4 compared to quarter 3.

Table 4: Unemployment by Age Cohorts [LU1]

Age	Quarter 3			Quarter 4			Change
	Unemployed	Total Labour Force	Rate	Unemployed	Total Labour Force	Rate	
15-19	73,583	1,483,474	5.0	73,933	1,784,269	4.1	0.90
20-24	402,416	2,511,219	16.0	352,708	2,491,336	14.2	1.80
25-29	241,920	3,073,407	7.9	224,775	2,992,627	7.5	0.40
30-34	116,580	2,956,090	3.9	129,376	3,020,017	4.3	- 0.40
35-39	69,058	2,328,840	3.0	70,108	2,302,653	3.0	-
40-44	66,040	2,007,273	3.3	25,861	1,988,423	1.3	2.00
45-49	3,049	1,615,522	0.2	12,538	1,615,254	0.8	- 0.60
50-54	11,959	1,163,706	1.0	24,812	1,165,623	2.1	- 1.10
55-59	7,937	994,370	0.8	15,484	963,513	1.6	- 0.80
60-64	2,100	677,123	0.3	-	708,902	0.0	0.30
Total	994,642	18,811,024	5.3	929,595	19,032,617	4.9	0.4

5.2 Long-Term Unemployment Rate

As indicated in Table 5, the survey results give a 2.2 per cent rate for the long-term unemployment in quarter 4. The youth aged 20 - 24 had the highest proportion of the Long term unemployed at 6.3 per cent. The long-term unemployment declined in quarter 4 compared to quarter 3.

Table 5: Long-Term Unemployment by Age Cohorts

Age	Quarter 3			Quarter 4			Change
	Long Term Unemployed	Labour Force	Rate	Long Term Unemployed	Labour Force	Rate	
15-19	24,106	1,483,474	1.6	42,269	1,784,269	2.4	0.8
20-24	191,349	2,511,219	7.6	157,241	2,491,336	6.3	- 1.3
25-29	100,664	3,073,407	3.3	109,358	2,992,627	3.7	0.4

50-54	7,652	1,163,706	0.7	7,414	1,165,623	0.6	- 0.1
55-59	4,937	994,370	0.5	9,016	963,513	0.9	0.4
60-64	0	677,123	-	0	708,902	-	-
Total	431,777	18,811,024	2.3	415,136	19,032,617	2.2	- 0.1

5.3 Unemployment and Time Related Unemployment

As indicated in Table 6, the Labour Underutilization (LU2), which is the combined rate of time-related underemployment and unemployment declined to 7.9 per cent in quarter 4 compared to 8.5 per cent in quarter 3. The highest rates of Labour underutilization are observed in the age groups 20-24 followed by the age group 15-19 at 18.1 and 10.6 per cent, respectively.

Table 6: Unemployment, Time - Related Underemployment and Labour Underutilization by Age Cohorts [LU2]

Age	Quarter 3				Quarter 4				Change
	Time related Under Employed	Unemployed	Total Labour Force	Labour Under - Utilization [LU2]	Time related Under Employed	Unemployed	Total Labour Force	Labour Under - Utilization [LU2]	
15-19	15,461	73,583	1,483,474	6.0	11,867	73,933	1,784,269	4.8	- 1.2
20-24	66,915	402,416	2,511,219	18.7	97,964	352,708	2,491,336	18.1	- 0.6

60-64	19,395	2,100	677,123	3.2	9,594	-	708,902	1.4	- 1.8
Total	602,745	994,642	18,811,024	8.5	571,674	929,595	19,032,617	7.9	- 0.6

6. Youth Not in Education, Employment or Training (NEET)

This section presents results of the youth aged 15-34, who are no longer in the education system and are not working or being trained for work. Table 7 presents the results of the youth who were not in education, employment or training at the time of the survey. The percentage of youth in NEET was recorded at 13.3 per cent in quarter 4 the same levels reported in quarter 3. The age group 25 – 29 and 30-34 recorded high proportions of persons in NEET at 20.5 and 15.7 per cent, respectively.

Table 7: Youth Not in Education, Employment or Training (NEET)

Age	Quarter 3			Quarter 4			Change
	Not in Education, Employment or Training*	Total Population	%	Not in Education, Employment or Training*	Total Population	%	
15-19	389,230	5,246,942	7.4	345,517	5,281,721	6.5	-0.9
20-24	865,922	4,414,851	19.6	909,945	4,444,115	20.5	0.9

30-34	464,499	3,544,379	13.1	421,120	3,567,873	11.8	-1.3
Total	2,273,740	17,032,307	13.3	2,279,410	17,145,205	13.3	0.0

* Vocational training was not captured so, some of the youth might still be in training.

Appendices

Appendix 1: Survey Design and Methodology

Sample Design

The KCHSP mainly focuses on data collection for key labour related indicators and poverty. Under the Programme, data is collected on quarterly basis and analysis undertaken to provide national estimates for labour indicators per quarter, and county estimates at the end of each year (12 months) for labour and poverty indicators among others. The monitoring of labour indicators on quarterly basis allows for analysis of changes over specific time periods.

Sample Size and Allocation

The KCHSP has a total of 50 study domains, namely; national, urban, rural and 47 counties. In designing the sample, the minimum sample size for anticipated integrated surveys and relative sizes of the counties was considered. The KCHSP sample consists of 1,684 clusters and 25,260 households. This sample comprise 1,300 clusters for cross-sectional survey and 384 clusters for panel study. At the county level, the sample ranges from a minimum of 24 clusters (360 households) to maximum of 56 clusters (840 households).

Two panels are implemented alongside the cross-sectional sample in each quarter. In total, 517 (325-cross-sectional and 192 panel) clusters (7,755 households) are visited every quarter. The sample allocation in each quarter is presented in Table 8.

Sample Frame

The sample for this survey was drawn from the Fifth National Sample Survey and Evaluation Programme (NASSEP V). The NASSEP V Frame is composed of 5,360 clusters selected with Probability Proportional to Size (PPS) from 96,251 Enumeration Areas (EAs) from the 2009 Population and Housing Census. In the development of NASSEP V, the 47 counties were stratified into 92 sampling strata, that is, urban and rural strata in 45 counties plus Nairobi and Mombasa Counties that are wholly urban.

Sampling

Two sets of units are sampled, namely; clusters and households. At the time of interviews in the households, it is expected that individuals are eligible for various modules of the survey. The sampling is done separately for cross-sectional and panel surveys.

Sampling of Clusters

The clusters are the primary sampling units for KCHSP and are selected independently from each of the 92 strata in NASSEP V frame. The required clusters for the entire year are selected systematically with equal probability. The selected clusters from each stratum are further randomized systematically into the four panels.

Sampling of Households

A total of 15 households per cluster are sampled systematically (with random start) from the list of updated households. Sampling of the households is done centrally at the head-office and interviews are only undertaken in the preselected households.

Appendix 2: Concepts and Definitions

Economically Active: The activity principle of the labour force framework is based on the concept of production of goods and services falling under the production frontiers of the United Nations System of National Accounts (SNA 2008). The economically active population analysed here consisted of the employed and the unemployed persons. The employed includes those persons who reported that they did some work during the reference period or they held a job even if they were not actually doing any work at the time. This covers persons who were on leave or had a business to return to. The unemployed were persons who reported to be without work, available for work and actively seeking work. Also included here were persons who though they may not satisfy the criteria for unemployment, reported that they were out of season or on temporary layoff.

Inactive Population: The economically inactive population also known as persons not in the labour force, covers persons who did not work or hold a job during the reference period and did not seek work because they were either full time students, infirm/incapacitated, retired or did not need work due to unspecified reasons. Persons who reported that they were retrenched or declared redundant and persons whose businesses closed and had not taken steps towards looking for alternative jobs or starting other businesses were included in the inactive population.

Labour force: consists of all persons in the working age population who are either employed or unemployed. It was previously also referred to as the 'currently active population'

Employment: Refers to performance of work as defined above. This term is used to measure the number of persons employed, including persons at work during a short reference period, and also persons temporarily absent from work but holding a job.

Unemployment: Under the strict terms is defined as people who do not have a job, have actively looked for work in the past four weeks, and are currently available for work.

Long-term unemployment: This refers to all unemployed persons with continuous periods of unemployment extending for one year or longer (52 weeks and over).

Labour Force Participation Rate (LFPR): The LFPR is a measure of the proportion of a country's working-age population that engages actively in the labour market, either by working or looking for work; it provides an indication of the size of the supply of labour available to engage in the production of goods and services, relative to the population at working age

Working patterns: Depending on their daily or weekly working hours, persons may work either on full-time or part-time basis.

The Working-age Population (WAP): includes all persons in the population above a specified age threshold used for statistical purposes to define the economically active population

Dependency ratio: This is an indicator of the economic burden the productive portion of the population must bear. It is computed as a ratio of the population considered to be

“dependent” (aged below 15 years and 65 years and above) to the working age population (15 to 64 years).

Employment to population ratio: This is the proportion of a country’s working age population that is employed. It gives an indication of the job opportunities that are available for the persons in the economically active age groups in an economy. A high employment to population ratio indicates that a large proportion of the population is employed, while a low ratio means that large share of the population is not directly involved in market related economic activities because they are either unemployed or out of the labour force.

Time-related underemployment rate: This is a measure of labour underutilization that provides information regarding the share of employed persons who are willing and available to increase their working time (for production within the SNA production boundary) and worked fewer hours than a specified time threshold during the reference period.

Labour underutilization: Refers to mismatches between labour supply and demand, which translate into an unmet need for employment among the population. Labour Under Utilization [LU2] is computed as the combined rate of time-related underemployment and unemployment.
